### Completed Extramurally Funded Research Projects

---

1. Nerve Tape is an Effective Means of Digital Nerve Repair in a Rodent Model  
Role: **Principal investigator**  
The goal of this study is to establish that nerve tape is an effective, efficient means of primary digital nerve repair in a rodent model.
2. "Coupled Immunohistologic and Spatial Analysis of Dupuytren's Nodules and Cords"  
Role: **Principal Investigator**  
The goal of this study is to gain an understanding of the immunological process driving the transformation from nodules to cords ultimately manifesting as finger deformities in Dupuytren's Disease.
3. "Restoring the quiescent state to pathogenic fibroblasts in Dupuytren's Disease."  
Role: **Co-Investigator**  
The goal of this study is to gain an understanding of the genomic, methylation patterns responsible for the local signal cascade driving the pathologic phenotypic expression leading to finger deformities in Dupuytren's Disease.
